SnapLogic AgentCreator

AI Agent Creation and Workflow Automation Simplified

Humans, AI-powered agents, and software are becoming increasingly accomplished collaborators. Together, they augment human capabilities, automate complex workflows, and take action based on vast data. SnapLogic is the platform connecting applications and data to artificial intelligence. With AgentCreator, users can create advanced automations that incorporate reasoning and decision-making, all grounded in secure, governed data.

Introducing AgentCreator

Enterprises are under pressure to harness the value of generative AI (GenAI) to stay competitive. Yet, many struggle with fragmented data, uncertain starting points, and limited in-house AI expertise. SnapLogic AgentCreator changes that, making the creation of autonomous agents accessible to every enterprise. It allows users to rapidly build AI solutions that transform business processes without needing specialized expertise or coding. AgentCreator's LLM-agnostic architecture future-proofs your AI investments by letting you leverage the best and latest generative models with your current and future tech stack. Going far beyond simple automations, AgentCreator equips your team to transform workflows and unlock new business opportunities.

Easily prepare data for AI

Whether your HR team needs an AI agent to streamline employee queries, your legal department seeks to automate contract redlining, or your finance team requires real-time data analysis for forecasting, AgentCreator simplifies the process of getting your data AI-ready. Powerful data preparation tools and 1,000+ integrations make it possible to quickly connect your data sources, applications, and APIs.

### Scale your agentic enterprise affordably

AgentCreator scales AI affordably by charging only for the services you use, with no per-user licensing fees, allowing your enterprise to grow cost-effectively without runaway expenses.

Automate document processing with IDP Agent

Included with AgentCreator, the IDP Agent automates data extraction from unstructured documents like invoices, purchase orders, resumes, and insurance claims. By leveraging LLMs, it streamlines document-centric processes, freeing your team to focus on higher-value tasks.

Boost productivity without increasing headcount

AgentCreator enhances productivity by automating highly manual or time-consuming workflows, helping your team achieve more without increasing headcount or manual effort. Enable your team to summarize large volumes of reports, extract insights from unstructured data, and process information at scale, significantly boosting both speed and efficiency.

AgentCreator Solution

AgentCreator is a comprehensive enterprise solution for building autonomous agents and AI-powered workflows. The solution includes:

LLM Snap Packs: Seamlessly integrate with leading Large Language Models like Amazon Bedrock, Azure OpenAI, OpenAI, and Google GenAI for advanced AI-driven automation.

Vector database Snap Packs: Supports vector searches and retrieval across platforms such as Pinecone, OpenSearch, MongoDB, and Snowflake, enabling enhanced data retrieval and AI-augmented actions.

Utilities Provides parsing tools for HTML, Markdown, PDFs, and unstructured data, along with utilities to embed and store data in vector databases for efficient queries.

IDP Agent: Automates complex document processing workflows like invoice and purchase order handling, streamlining operations with pre-built pipeline patterns.

Enterprise-grade governance: Encrypt data end-to-end and ground your AI in anonymized enterprise data. Gain complete visibility with observability tools like output logs and agent action previews. Evaluate and score AI outputs using other LLMs to ensure accuracy, reliability, and compliance with industry standards.

SnapLogic is the leader in generative integration. As a pioneer in AI-led integration, the SnapLogic Platform accelerates digital transformation across the enterprise and empowers everyone to integrate faster and easier. Whether automating business processes, democratizing data, or delivering digital products and services, SnapLogic enables you to simplify your technology stack and take your enterprise further. Thousands of enterprises around the globe rely on SnapLogic to integrate, automate and orchestrate the flow of data across their business. Join the generative integration movement at **snaplogic.com**.
