

SnapLogic AgentCreator

AI Agent Creation and Workflow Automation Simplified

Humans, AI-powered agents, and software are becoming increasingly accomplished collaborators. Together, they augment human capabilities, automate complex workflows, and take action based on vast data. SnapLogic is the platform connecting applications and data to artificial intelligence. With AgentCreator, users can create advanced automations that incorporate reasoning and decision-making, all grounded in secure, governed data.

Introducing AgentCreator

Enterprises are under pressure to harness the value of generative AI (GenAI) to stay competitive. Yet, many struggle with fragmented data, uncertain starting points, and limited in-house AI expertise. SnapLogic AgentCreator is already helping enterprises in many different industries to remove those obstacles to AI adoption, making the creation of autonomous agents accessible to every enterprise.

AgentCreator adds new capabilities based on that real-world experience, allowing users to rapidly build AI solutions that transform business processes without needing specialized expertise or coding. The new Prompt Composer accelerates development and makes it easy to experiment and learn the new AI-powered capabilities for working with data.

AgentCreator’s LLM-agnostic architecture along with multimodal support future-proofs your AI investments by letting you leverage the best and latest generative models with your current and future tech stack.

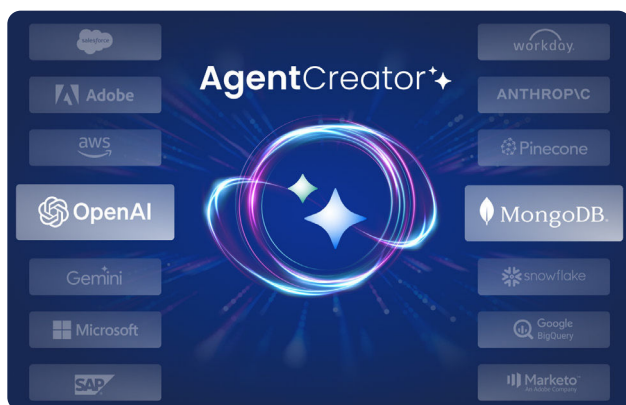

With features like looping, tool calling, and branching, along with comprehensive observability for monitoring agent decisions, AgentCreator goes far beyond simple automations. Whether it’s for AI-enabled apps, conversational assistants, Intelligent Document Processing (IDP), or truly autonomous agents, AgentCreator equips your team to transform workflows and unlock new business opportunities.

Easily prepare data for AI and scale your agentic enterprise affordably

Whether your HR team needs an AI agent to streamline employee queries, your legal department seeks to automate contract redlining, or your finance team requires real-time data analysis for forecasting, AgentCreator simplifies the process of getting your data AI-ready. Powerful data preparation tools and 1,000+ integrations make it possible to quickly connect your data sources, applications, and APIs. AgentCreator also scales AI affordably by charging only for the services you use, with no per-user licensing fees, allowing your enterprise to grow cost-effectively without runaway expenses.

Boost productivity without increasing headcount

AgentCreator enhances productivity by automating highly manual or time-consuming workflows, helping your team achieve more without increasing headcount or manual effort. Enable your team to summarize large volumes of reports, extract insights from unstructured data, and process information at scale, significantly boosting both speed and efficiency.

AgentCreator Solution

AgentCreator is a comprehensive enterprise solution for building autonomous agents and AI-powered workflows. The solution includes:

LLM Snap Packs: Seamlessly integrate with leading Large Language Models like Amazon Bedrock, Azure OpenAI, and Google GenAI for advanced AI-driven automation.

Utilities: Provides parsing tools for HTML, Markdown, PDFs, and unstructured data, along with utilities to embed and store data in vector databases for efficient queries.

Prompt Composer: Quick and easy interactive prompt development, with built-in AI assistant and a single unified view of the input data and schema together to further accelerate release cycles.

Agent Visualizer: Gain complete visibility into how your AI agents think and act with full transparency into agent reasoning, empowering enterprises to trust, audit, and continually refine agent behavior.

Vector database Snap Packs: Supports vector searches and retrieval across platforms such as Pinecone, OpenSearch, MongoDB, and Snowflake, enabling enhanced data retrieval and AI-augmented actions.

Enterprise-grade governance: Ensure data end-to-end encryption and ground your AI in anonymized enterprise data. Define and enforce fine-grained access and governance policies for agents and LLMs. Evaluate and score AI responses using secondary LLMs to ensure accuracy, reliability, and compliance with industry standards.

SnapLogic is the leader in generative integration. As a pioneer in AI-led integration, the SnapLogic Platform accelerates digital transformation across the enterprise and empowers everyone to integrate faster and easier. Whether automating business processes, democratizing data, or delivering digital products and services, SnapLogic enables you to simplify your technology stack and take your enterprise further. Thousands of enterprises around the globe rely on SnapLogic to integrate, automate and orchestrate the flow of data across their business. Join the generative integration movement at snaplogic.com.
