SnapLogic Platform for Generative Integration

One platform to create, integrate, and orchestrate data products, apps, APIs and agents

The SnapLogic Platform for Generative Integration uniquely combines application and data integration and API management with agent creation to help enterprises simplify their tech stack. Our intuitive, no-code platform provides the fastest path for modernizing your architecture and building a composable, agentic enterprise. Our integration copilot and visual designer empowers everyone—from IT to business users—to build and orchestrate integrations, APIs, workflows, and agents up to 100x faster.

Use Cases Supported by the Platform

Unifying data and application integration, API management, and agent creation into a single platform, SnapLogic supports several use cases. Whether you seek to modernize and build a composable architecture for the age of AI, accelerate GenAI-powered transformation, automate business processes, migrate to the cloud, or consolidate or aggregate data for better visibility and insight, SnapLogic is your all-in-one solution for delivering faster outcomes at scale.

Integration Platform Architecture

The SnapLogic integration platform is purpose-built for next-generation application and data integration, API management, and agent creation requirements. Manage orchestrations, schedules, connections, security, and policy enforcement with powerful modules like Designer, Manager, and Monitor. Move data seamlessly between applications, data sources, APIs, and agents via Snaplex, a self-upgrading execution engine that elastically scales with processing demands.

SnapLogic AI

The SnapLogic family of AI capabilities harness the power of GenAI and machine learning (ML) to enable users to integrate and create new GenAI applications up to 100x faster.

- **AgentCreator:** Empower users to visually design, deploy, and manage AI agents that connect to enterprise data sources and applications, get data AI-ready, and operate with varying levels of autonomy—without coding.

- **SnapGPT:** Accelerate onboarding and boost productivity with SnapGPT, your natural language integration copilot. Ask platform questions, generate pipelines, document integrations, or optimize performance—just by chatting. Perfect for both citizen integrators and expert developers.

- **AutoSuggest:** Leverage the powerful recommendation engine trained using petabytes of metadata for contextual suggestions when accessing data, transforming data, or building integrations.

Data Integration

Enable fast, flexible movement of data to the cloud or between systems with visual ETL and ELT tools. Send insights back to applications via reverse ETL, and activate repeatable data automations with ease.

> "Of all our enterprise integration tools, I asked my team and our citizen developers, which vary from basic to experts, and when I challenged them all to propose a more user-friendly solution than SnapLogic, no one could."
>
> **Jamie Locks**, VP of Integration and App Development, Schneider Electric

Application Integration

Leverage thousands of pre-built connectors (Snaps) and templates (Patterns) to integrate SaaS, on-prem, and custom applications. SnapLogic helps modernize legacy systems and scale automation — no custom coding required.

> "After comparing all available platforms on the market, SnapLogic proved to be the highest performing solution for integration and agent development, reducing maintenance costs by 90%. With the ability to seamlessly build GenAI applications in just a matter of days, SnapLogic has been essential in automating processes, eliminating costly resources, and streamlining business operations."
>
> **Matt Bostrom**, VP of Enterprise Technology, Spirent

API Management

Deliver full-lifecycle API creation and management with a visual, low-code experience. Enable teams to rapidly design, secure, version, and monitor APIs with intuitive policy enforcement, comprehensive lifecycle management, and built-in analytics. Easily share APIs with internal teams, customers, and partners through a customizable Developer Portal — accelerating reuse and ecosystem engagement. Enable a composable, API-first architecture that drives agility and innovation in the age of AI.

Snaplex Runtime

Stream data between agents, applications, and data sources through a Snaplex, a self-upgrading execution network that scales elastically based on data processing volumes.

- Provides elastic scalability
- Supports enterprise data security standards
- Does not store your data
- Facilitates real-time streaming speeds
- Enables integration runtime in the cloud and behind a firewall, on premises or in your VPC in the cloud
- Handles massive data volumes for the most demanding jobs
